

mZeal Health Services Offerings

Revenue Cycle Management

Health IT Data and Infrastructure Security.

HIPAA 4010 to 5010 Transition and ICD9 to ICD10 Conversion.

Health Data: Integration, Visualization and Data mining.

HL7 Integration and Implementation.

Lab Interfaces and Connectivity.

EHR Consulting

Medical Billing & AR Collections

mZeal provides end-to-end medical claims and billing services; together with in-depth reporting and patient support. We tailor medical billing services to your practice's specific needs. With an aggressive and well trained Insurance follow-up team under the supervision of industry veterans; we have the ability to customize medical billing services to an array of healthcare specialties of all sizes. mZeal's strong IT team, supporting the core operations, has been the key differentiator for all our offerings. mZeal has committed a team to research claim denials which develops elegant, intelligent solutions to solve those claims issues. With very quick tangible benefits

we provide following competitive, cost efficient services:

1. PRE-CERTIFICATION & INSURANCE VERIFICATION
2. PATIENT DEMOGRAPHIC ENTRY
3. CPT AND ICD-9 CODING
4. CHARGE ENTRY
5. CLAIMS SUBMISSION
6. PAYMENT POSTING
7. ACCOUNT RECEIVABLES FOLLOW-UP DENIAL MANAGEMENT

Health IT Data and Infrastructure

With the increasing of data security and privacy in the arena of health IT; mZeal has recognized that security must be enforced on multiple levels beginning with infrastructure, health records, interfaces, and devices. mZeal security modules plug into EMRs to provide controlled access to medical records for patients and providers. mZeal's device plot solution using RFID, plots devices in a 3D map which prevents misuse and misplace of devices. Health Care providers and devices are tied together to back track their usage, maintenance and calibration. This security module can also be used in all data integration and access control layers.

HIPAA 4010 to 5010 Transition and ICD9 to ICD10 Conversion

As the deadline for implementation of 5010 and ICD 10 approaches fast, mZeal's team will provide you with solutions and manpower to help you reach the deadline quickly. With prebuilt interfaces and test beds, the mZeal team can partner with your IT team or work independently to help your transition from 4010 to 5010 and ICD9 to IDC10. We recognize the diversity in the many systems that are deployed and the differences in operations from organization to organization. Keeping those differences in mind, mZeal uses easy to customize XML based interfaces to facilitate migration activities

Health Data: Integration, Visualization and Data mining.

For any given patient, data may be stored in multiple places. For instance, Emergency Room data may be stored on different system than the ambulatory care data of the primary care physician and speciality clinic. mZeal data mining and integration services is a specialized, focused solution. It helps in the mining and visualizing of data in one central place, while accessing data from various heterogeneous systems. This type of visualization helps in providing complex statistical data for decision support, specialists and researchers in private, government and academic settings. Data integration combined with mZeal security solutions provides a unique platform for the seamless integration of large, non-located clinics with heterogeneous, independent data. This is done while complying with mZeal's high security standards. mZeal's health data integration and visualization team along, with its extended team from the University of Massachusetts, has demonstrated its visualization capabilities in projects from both commercial and government sectors .

HL7 Integration and Implementation.

If you are in the middle of a HL7 implementation, planning for one, or transitioning from an older version of HL7, the mZeal HL7 team has all the expertise required to help you reach that goal. With large-industry expertise, consultants who were a part of the standards committee and subject matter experts from the commercial world; mZeal is positioned to take on large HL7 implementation projects for both governmental and non-governmental bodies. mZeal is proud to show its wide range of HL7 expertise. As requirements demand, mZeal can provide services ranging from HL7 testers, HL7 Business Analysts, HL7 integration specialists, HL7 developers to Subject Matter Experts who can comment on the standards itself. With members of the team who were authors for the HL7 implementation guides themselves, we make sure we meet your goals in an elegant, cost effective manner.

Lab Interfaces and Connectivity

- Physicians can schedule patients for Lab procedures right from their office, without contacting the Lab for open schedules.
- Labs can expose their schedule and resources to physicians securely and seamlessly.
- Lab orders results are automatically sent to physicians through standard Health Level 7 (HL7) formatted messages.
- Patients may obtain lab results securely through their web-accessible Personal Health Record (PHR.)
- In-depth reports to help physicians track lab orders by patient, date of service, Labs used, etc; are available.
- Business level dashboards, which enable Labs to make enterprise level decisions.
- Electronic submission of Insurance claim charges to payers, Payment posting and AR reports.

EHR Consulting

mZeal Provides EHR consulting throughout your implementation life cycle. mZeal is with you, from choosing a right product, transitioning to your new product, through integrating your legacy systems and feeding data to your downstream applications. mZeal provides Data Migration services to facilitate moving your current data to your new system and assist in archiving your old data. Being HIPAA complaint, data security is present every step of the way. mZeal will help make your EHR implementation a success to help reach your ROI quickly. Our services include:

1. Infrastructure Planning.
2. EMR Selections and Evaluation.
3. Data Migration.
